THE GEOLOGY OF ISRAEL

Montag, 28.07.2008, 10:30 Uhr
Paläontologisches Museum, Hörsaal 11 (Erdgeschoß)
Richard Wagner-Str. 10
80333 München

Israel is a small country (- but much in the headlines), located on the eastern side of the Mediterranean, and along the transform boundary between the African and the Arabian plates.

This lecture should provide a short review on its prominent geological features, presented in many photographs, with remarks to biblical and other archeological sites. Most of these locations are easily accessible and the distances are relatively short; maybe you should plan a visit to the Holy Land and see the rocks by yourself...
